SFC KEY INTERLOCKS & PROCESS MANAGEMENT SYSTEMS

SECURITY PRODUCTS

Where security lock-off devices are required to provide mechanical locking of manual equipment, SFC offer a full complement of security and commissioning tools. If sequential control is unnecessary but a secure lock is required, the SFC range of security products can provide the solution you need.

EXPANDED CHAINLOK

The Chainlok is a unique device which combines the best features of padlocks and interlocks.

A durable body and chain made from 316 Stainless Steel makes it suitable for use in the most hostile environments. Chainlok comes with 0.5m chain as standard (longer lengths available on request). Flag style 'Colour Aware Key' enables incorporation into interlock (key exchange) systems.

Operating condition;

Key Trapped - Chain Free
Key Free - Chain Locked

Flip caps prevent ingress of foreign matter when key is removed.

CAR SEAL

For 'one-time-only' securing of manual operators, including securing of manual valves, switches and enclosures. A simple 'break-away' screw secures the seal in place. Removal can only be achieved by cutting the seal cable.

Two body and cable sizes are available, along with varying lengths of cable. Cable breaking strains are available to 1750kg.

Re-usable car seals are also available.

Ideal for use in commissioning procedures.
