

Technical Description of Control Room Key Cabinets

Cabinet Construction.

Our standard supply cabinet is fabricated from high grade rolled mild steel and painted with an epoxy resin spray painted finish.

The cabinet door is lockable and is fitted with a synthetic glass viewing panel in 'Makrolon' material.

For a fully detailed description of the SFC Control Room Key Safe (cabinet) system, please refer to the section - 'Operation & Control' in our enclosed product brochure.

For the Control Room Key Safe tags, we propose in addition to the agreed specific data you require that we should also include the statement 'WORK IN PROGRESS' -when a key is missing from the cabinet, this is an "**abnormal**" condition and the cabinet system should alert the Operations Superintendent / Control Room Supervisor to work events as they occur.
